

DE Utility Model No.: 7 120 165

## Abstract

### Object of the Invention.

It is the object of the invention to provide a microscope stage with an object holder and a filter holder which allows the object holder to be positioned on the microscope stage in a comfortable manner, to be held there safely and to easily displaced if desired and which allows the easy positioning of a different filter and the light part to the microscopic object, and whereby manufacturing of the microscope stage shall be easily possible and at low cost.

### Invention:

According to the invention, the microscope stage is magnetic and the object holder and the filter holder are made of steel plates. Preferably, the magnetic microscope stage is made of a plate of plastic. On the lower surface of said plate, rod magnets are attached. In an advantageous manner, the object holder is made of a steel strip which comprises an opening for passing the light beam and a recess on the upper surface for receiving the slide. The filter holder is preferably made of a steel strip comprising openings in the longitudinal direction where the filter discs can be fitted.
